

LED SOLAR LIGHT BOX KIT

ET4-7015

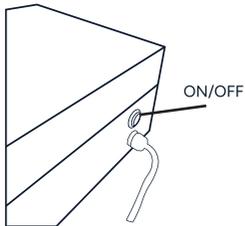

USER MANUAL

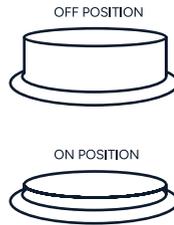

BOX CONTENTS

LED reel
Solar panel with support bracket
Mount fixings

INSTALLATION

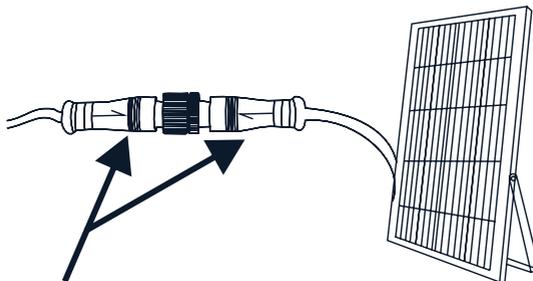

1. Locate ON/OFF button on the back of the panel

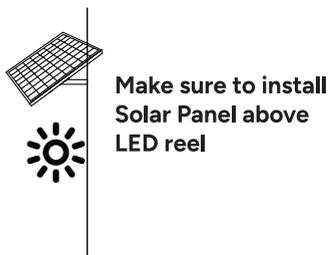

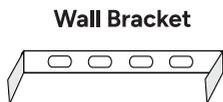

2. Press down the button to turn the system ON

NOTE: The LED reel will not turn on if the solar panel is exposed to a light source. To test if the system is working correctly, cover the face of the solar panel. Once the solar panel is no longer exposed to light, the LED reel should light up after 3-5 seconds

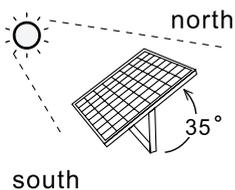

The LED reel/solar panel connector comes pre-connected, but always make sure that the connection is secure and tight.

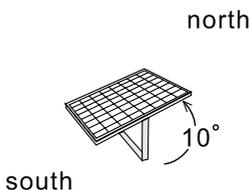

Fix the product on the wall with supplied wall bolts. The installation height is suggested to be between 3-6 metres.

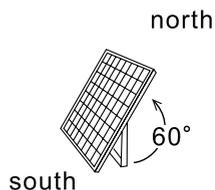

Ensure that the solar panels are installed at the correct angle for your location and oriented appropriately for your hemisphere. Additionally, make sure there are no obstructions such as trees, shadows, or buildings blocking the sunlight. The panels need direct, unobstructed sunlight to charge effectively.
